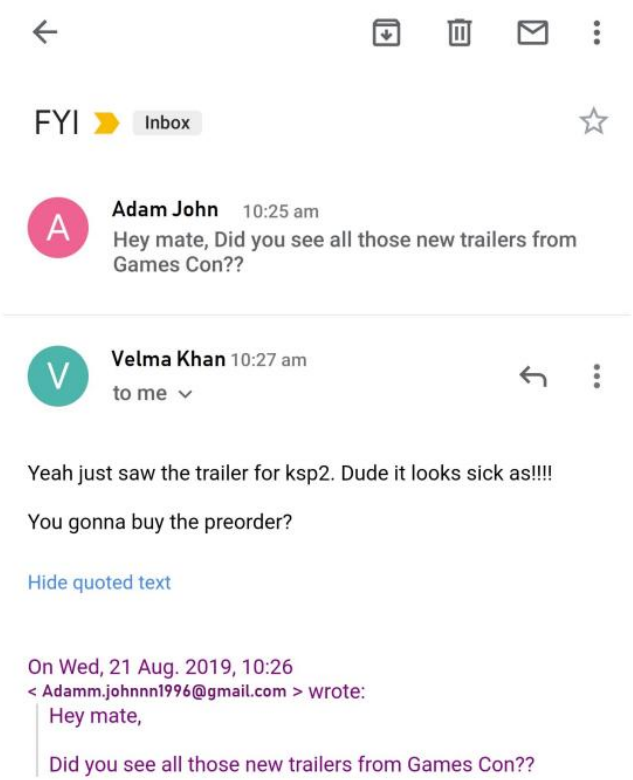
Please download the pdf document in the resources section to view the emails you will need to investigate.

In your investigation of the emails, what signs did you find to indicate whether each email was malicious or safe? Give your opinion and analysis on these emails in this document, then upload it as your submission.

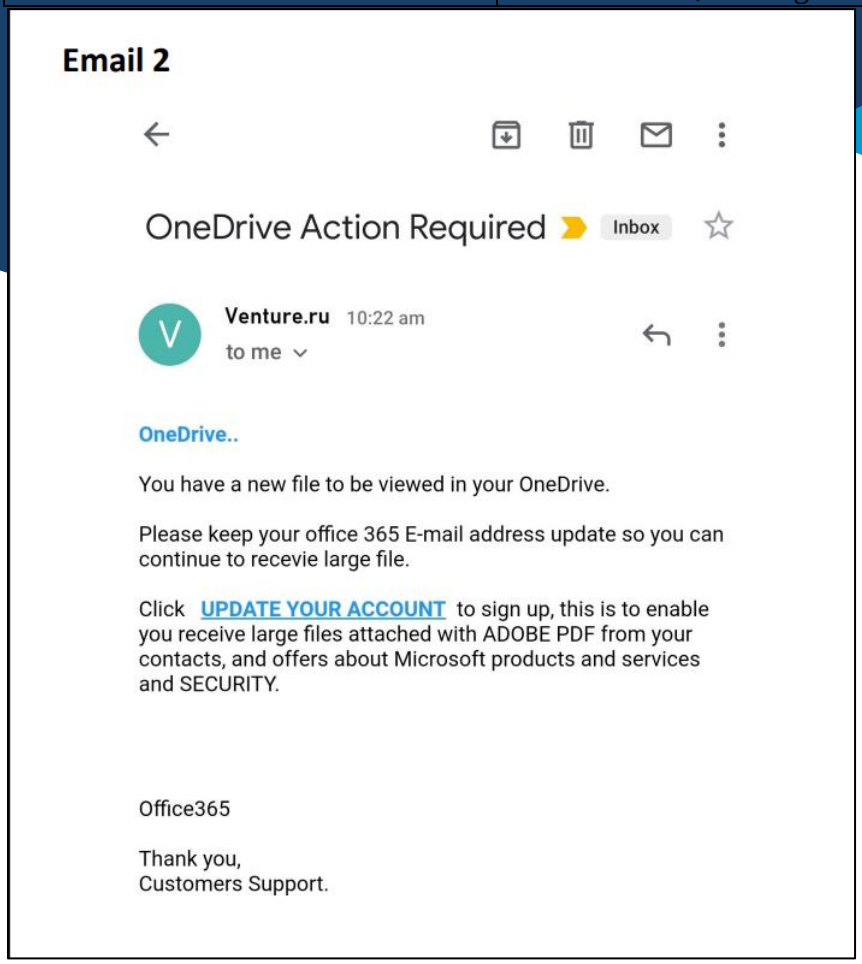
Email 1



Email 1:

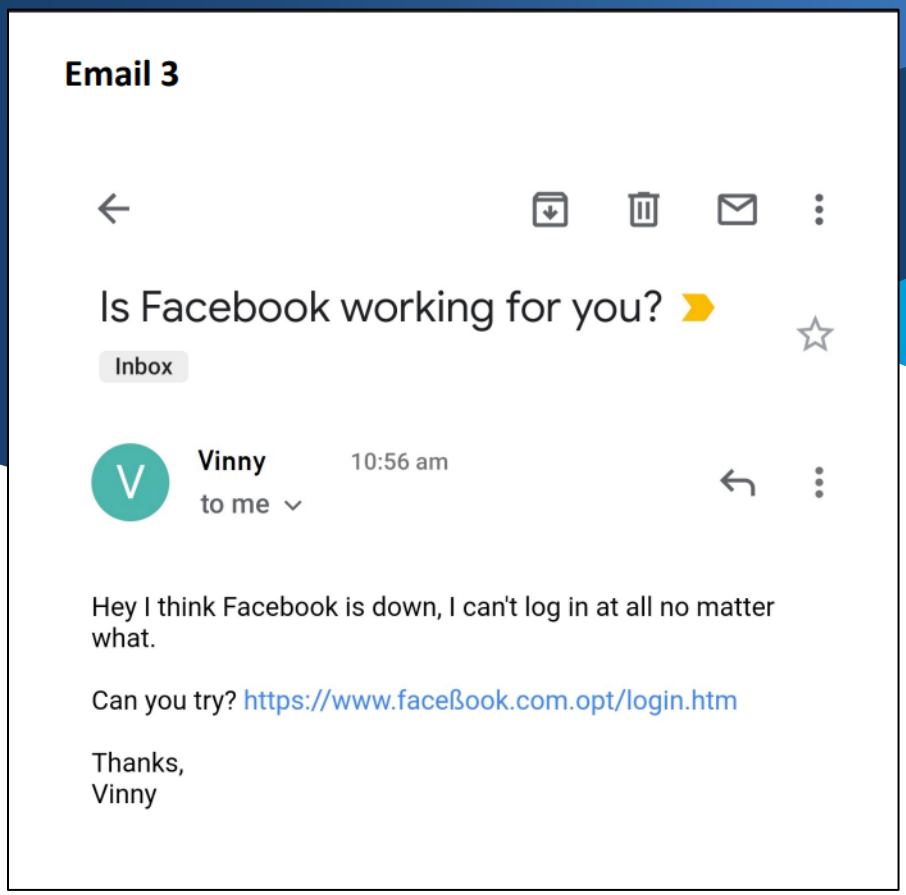
Is this email Safe or Malicious?	My Analysis
Safe	• This email has a casual tone and looks like normal communication between people who know each other and are talking about games. • The conversation between Adam and Velma is about game trailers and pre-orders, which is normal.

	• It is related to a gaming event (Games Con), so the context makes sense. • There are no suspicious links, attachments, or anything asking for personal information. • Overall, nothing in this email looks malicious.



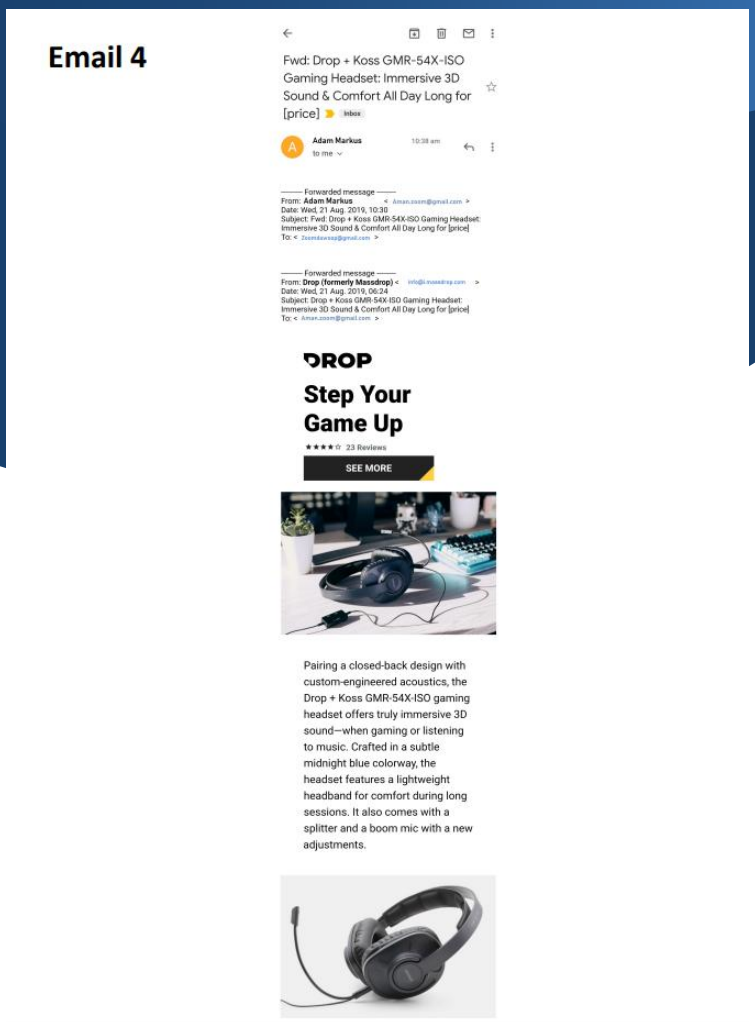
Email 2:

Is this email Safe or Malicious?	My Analysis
malicious	• The sender domain (venture.ru) looks suspicious and is not a trusted Microsoft or Office 365 domain. • There are spelling and grammar mistakes, which is not typical for official emails. • The formatting looks unprofessional and inconsistent. • The email is trying to create urgency with "Action Required," which is a common phishing tactic. • The "UPDATE YOUR ACCOUNT" link is suspicious and could lead to credential theft.



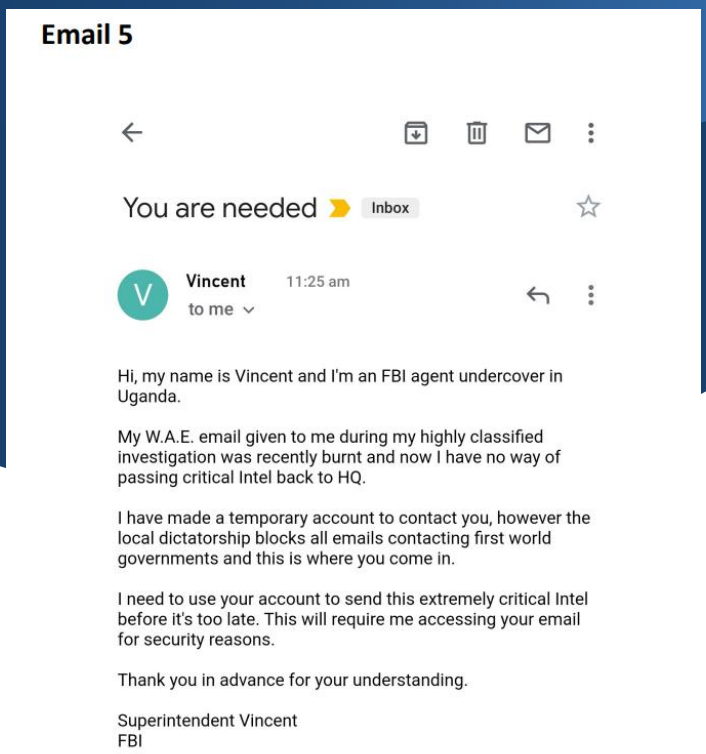
Email 3:

Is this email Safe or Malicious?	My Analysis
Malicious	• The link contains a fake version of Facebook ("faceßook"), which is a clear trick to imitate the real site. • The domain structure is unusual and not what Facebook normally uses. • The message is casual and tries to make the user click the link without thinking. • It likely leads to a fake login page designed to steal credentials.



Email 4:

Is this email Safe or Malicious?	My Analysis
Safe	• This looks like a normal promotional email for a gaming headset. • There are no suspicious links or attachments. • It does not ask for any personal or login details. • It looks like standard marketing content.



Email 5:

Is this email Safe or Malicious?	My Analysis
Malicious	• The sender claims to be an FBI agent, which is not realistic. • No official agency would contact someone this way or ask for email access. • The email is asking for account access, which is a major red flag. • The writing is unprofessional with vague terms and poor grammar. • It uses urgency and authority to pressure the user, which is typical phishing behaviour.

Corrigan, Reuben

RE: WFH

To Bryce, Alan

The project is going well no real problems yet.

The zip file is not ready yet when it is ill send it

Sorry no to coffee I'm busy with the family and will be unavailable all day

Best regards,

Reuben Corrigan | Cyber Security Trainee | Group Technology ANZ

Subject: WFH

Hey Reuben,

Hope the project is coming along smoothly on your end.

I'll be working from home for the rest of this week as per previous discussion.

Can I get a zip of the workload for this week when you get the chance?

On a side-note; can we get coffee on Sunday arvo to discuss last week's Stand-up? I just wanted to go over a few things.

Kind regards,

Alan Bryce | Cyber Security Analyst | Group Technology ANZ

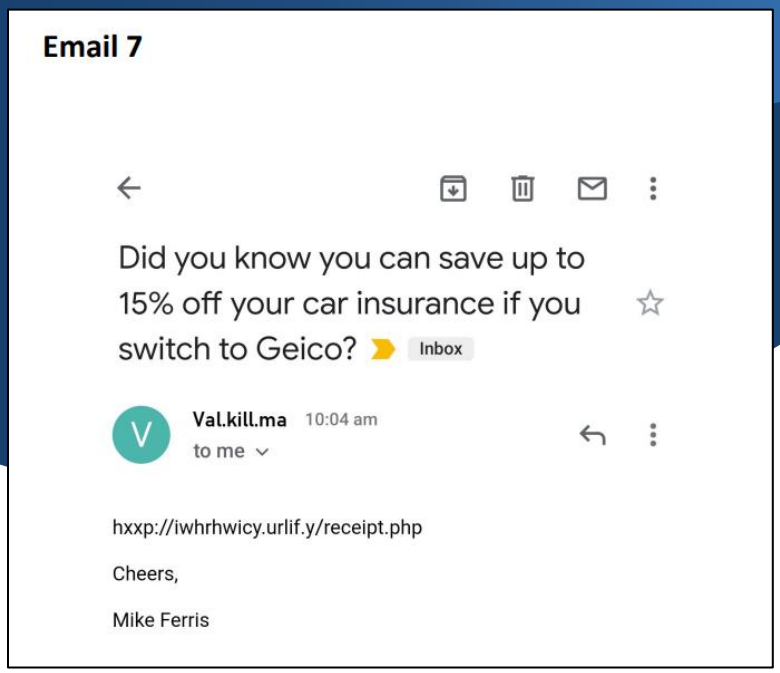
Email 6:

Is this email Safe or Malicious?	My Analysis
Safe	• This looks like normal internal communication using the @anz.com domain. • It is between two employees discussing work-related updates. • There are no suspicious links or attachments. • • Nothing in the message suggests phishing or malicious intent.



Email 7:

Is this email Safe or Malicious?	My Analysis
Malicious	• The sender name and email look random and not legitimate. • The link is hidden using "hxxp," which is often used in phishing emails. • The domain looks suspicious and not related to any real company. • The message is generic and about insurance discounts, which is common in spam/phishing emails. • There is no verifiable sender or proper company information.
